

Industry: Enterprise Mobility
Case Study

Application will help user to elaborate the vision, increasing the speed of business transactions and provide better modes of report and management.

The Client

The clients mission is to leverage the power of enterprise mobility to increase productivity, reduce costs and streamline operations. SmartGlance™, the company's first mobile business app, delivers secure, on demand access to rich, graphical reports from any corporate database via mobile smart phones, allowing managers to make smarter, faster decisions from anywhere at ,any time. The clients vision was to develop a suite of Smart mobile business applications designed to enhance workflows, improve business intelligence, speed up transactions, and provide new reporting and management tools.

Application Description

The "Smart Glance" application brings corporate/production data to user Smartphone's and allows user to view, analyze real-time data in form of reports with graphical representation, so that with just one glance user can make smart decisions. "Smart Glance" is a corporate/production data analysis application from which provides mobility to corporate users. Application will help user to elaborate the vision, increasing the speed of business transactions and provide better modes of report and management.
